## "How does it work?"

Scars need an "ideal healing environment," meaning the appropriate balance of moisture and maximum exposure to oxygen. Similar to Xeragel™, Pro-Sil™ is a fully-encapsulating silicone formulation — it completely covers the scar treatment site for uniform treatment of the entire site. Although the entire site is covered, Pro-Sil™ is semi-permeable when applied, allowing oxygen to enter while keeping excess moisture out — the ideal environment for healing scar tissue.
